LEP-DMS is highly scalable and suitable for all organizations big or small.

Capabilities

Patch Management

Automatically perform Windows patching to ensure that servers, workstations and laptops are secured and updated. Administrator may rollback a patch if necessary.

Audit and Reporting (Hardware & Software)

Audit endpoint's resources and ensure that the user adheres to the recommended security setting. Additionally, reports are generated based on audit information and may be tailored to requirements.

Remote Monitoring

Remote monitoring allows IT administrators to constantly monitor server, workstations, remote computers and applications.

Remote Control

Using the remote control feature, administrators are able to quickly provide technical assistance to endpoints without the need to be physically present on-site.

Resource Monitoring

Retrieve endpoint's resources usage data such as CPU, RAM, and HDD usage and displays it via the LEP Dashboard to provide IT administrators with a quick and easy way to monitor and allocate resources.
